

2023 Impact Report

New Jersey LCV New Jersey LCV
Education Fund

New Jersey LCV is the statewide political voice for the environment.

We elect environmentally responsible candidates to state and local offices, advocate for strong environmental policies, and hold our elected officials accountable to safeguard the health of our communities, the beauty of our state, and the strength of our economy.

Gifts to New Jersey LCV are not tax-deductible.

New Jersey LCV Education Fund protects our precious natural resources.

We raise awareness of key environmental challenges and increase the efficacy of the entire environmental community. We work in coalition with allies to ensure that our children and grandchildren have the clean drinking water, air, and open spaces that they deserve.

Gifts to New Jersey LCV Education Fund are tax-deductible.

From the Executive Director

Ed Potosnak
Executive Director, New Jersey LCV & New Jersey LCV Education Fund

Dear Conservation Voter,

There is no longer any doubt that we are now in a climate crisis and facing an existential threat to the planet and our existence. New Jerseyans don't need to imagine the effects of climate change - they're experiencing it right now with the extreme heat, uncontrolled flooding, increase in wildfires, and dangerous tornadoes.

We are also keenly aware that low income and communities of color are also more vulnerable to the effects of these hazardous weather events, as they often lack adequate resources, infrastructure, and income to prepare for and recover from natural disasters.

All these unusual weather events will become more frequent due to climate change, and while some improvements have been made there's still a lot of work that needs to be done to prepare our state and protect our communities. That's why the work we do at New Jersey LCV is so important.

We continue to advocate for the transition to a clean energy future powered by offshore wind and community solar. A transition to renewable energy is one of the most significant tools to act on climate change and also represents a great opportunity to improve health outcomes. A reduction in fossil fuel pollution will bring cleaner air and better health, including reductions in diseases like cancer, heart attacks, and asthma.

New Jersey LCV has already had success with our legislative efforts this year. Working with allies and together with your support, we have been successful in achieving an executive order announcing 100% clean electricity from renewable energy sources by 2035. We also passed an electric school bus law, which allocates funds to create an electric vehicle school bus program, with half going to low-income, urban, or environmental justice communities, and

passed a low carbon concrete law that will help reduce carbon pollution from homes and businesses by encouraging the use of low-carbon concrete building materials for construction. Finally, we helped pass legislation that requires communities to include climate hazards in the state hazard mitigation plan, keeping our communities, businesses, and homes safer from the effects of climate change.

New Jersey LCV also speaks through elections by endorsing and electing environmental champions. This year we endorsed 155 candidates in state and local elections. Due to our hard work, and the contributions of our members, we defended and expanded the environmental majority in the legislature and elected many environmental champions in local races.

This year, the New Jersey LCV Board of Directors and staff once again rose to the challenge and made this a banner year. By increasing our influence and collaborating with like-minded individuals and organizations, we can help make New Jersey a great place to live for current and future generations.

Thank you again for your continued support of this important work.

In Conservation,

Let's remember that achieving our conservation goals often requires a long-term commitment and a broad network of supporters.

EQUITY WORK

Approaching programs with an equity lens

Our staff continues to strengthen our internal equity and inclusion work to help ensure that we're approaching our externally facing programs and partnerships with an equity lens. The Justice and Equity committee continues to oversee semi-monthly learning discussions on topics related to racial justice, gender justice, intersectionality, disability, and more, including a shared board/staff conversation on intersectional environmentalism and our organization-wide racial justice and equity work. Another staff committee actively works to recognize staff contributions and milestones, creates opportunities for staff to support and get to know each other, and fosters a positive and inclusive organizational culture.

This year, staff contracted with The Equity Paradigm, a firm based in North Carolina, to revisit, revise, and expand our racial justice and equity work plan. The Justice and Equity team facilitated a four-part discussion series for staff to delve deeper into our internal culture and focus on short-term priorities and activities that help us reach real and sustainable goals related to racial justice and equity. Based on these assessments our team has updated our organization's

justice and equity work plan and developed a process for all staff to review, update and monitor activities in the work plan, to ensure that diversity, equity, inclusion and justice continue to be part of every department's goals and work plan.

This year, the William Penn Foundation renewed funding for a Delaware River watershed-wide program to build organizational capacity for environmental organizations in the region. The Watershed Racial Justice Initiative provides support for any organization funded by the William Penn Foundation in the Watershed Protection portfolio to learn more about how white supremacy culture pervades the environmental movement and how to take concrete steps toward racial equity. It includes virtual training, opportunities to participate in group learning discussions, and other tools for watershed organizations to undo racist structures, to create more inclusive organizations that better reflect the communities they serve, and to become better allies to communities of color experiencing environmental racism and degradation. The initiative provides resources and training to help organizations across the watershed.

From the New Jersey LCV Board Chair

Julia Somers
Chair, New Jersey LCV

Dear Supporter,

I couldn't be prouder of what the New Jersey LCV board and staff achieved in 2023 as we worked to ensure that all families in New Jersey have safe drinking water, clean air, and equitable access to open space.

This year's achievements include an executive order from Governor Murphy committing to 100% clean energy by 2035, the signing of an electric school bus bill into law, significantly advancing legislation to include climate threats in our state hazard mitigation plan, and nearly unanimous, bipartisan support for low-carbon building materials legislation.

Our marvelous team, led by our exemplary Executive Director, Ed Potosnak, also took on the fossil fuel industry in support of offshore wind and welcomed the addition of community solar to our state in an effort to provide affordable energy for all residents, including those that don't own a home or can't afford to place solar panels on their roofs. A transition to renewable energy is one of the most significant tools to act on climate change and also represents a great opportunity to improve the health of our communities, increase domestic control over our energy production, and create family-sustaining jobs.

We endorsed 155 candidates on the state and local level in this year's elections. We are particularly proud that many of our endorsees across the state won, promoting their support for the environment. These newly and re-elected environmental champions all met our rigorous endorsement process, ensuring they will always consider the environmental implications of their leadership when in office, now and in the future.

Environmental issues of course transcend political boundaries and affect us all, regardless of our affiliations or beliefs. This is why our organization operates on a bipartisan basis. We believe in the power of unity, in bringing together people from diverse backgrounds, industries, and ideologies to work towards common goals that will secure a healthier, more sustainable future for our state.

It is through the collective efforts of supporters and donors like you that we have been able to make significant strides in preserving and safeguarding our beautiful state. Your contributions have played a vital role in funding critical projects, raising awareness, and advocating for policies that prioritize environmental sustainability.

Thank you for volunteering, sharing your expertise, or simply staying informed and engaged. Together, we can ensure that our New Jersey remains a vibrant and sustainable home for current and future generations.

We move forward with great optimism, knowing that, with supporters like you by our side, we can make a lasting difference for the environment and the world we all share.

With sincere appreciation,

Legislative Priorities

Every legislative session, New Jersey LCV, with the input of our staff, board, partners, and members create a common legislative agenda that reflects the shared priorities of the environmental community in New Jersey. In our 2022-2023 Common Legislative Agenda for the Environment, we have the following five priorities.

Ensuring children have access to healthy and advanced public transit through electric school buses.

Transportation is the leading contributor to emissions in New Jersey, and we helped pass the electric school bus bill to fund \$45 million over three years to school districts across the state, particularly communities overburdened by pollution, transitioning dirty diesel buses to clean electric and giving kids a safe healthy ride to school.

Building a more resilient New Jersey and protecting residents by including climate change into the State Hazard Mitigation Plan.

Our state is already feeling the effects of climate change and must adapt its disaster plans to account for this fact in order to protect our families and communities. This legislation, advanced during our lame duck session, will keep our families, businesses, and communities safer, and we anticipate full passage in the new year.

Reducing carbon pollution from homes and businesses by using low-carbon building materials for construction.

If concrete was a country, it would be the third-largest source of emissions in the world. We can build more sustainably by encouraging the use of new technologies that reduce our carbon footprint, and this legislation, passed into law in 2023, has already inspired other states to pursue similar goals.

Requiring 100% clean electricity by 2035, with strong commitments to bring overburdened communities access to clean energy resources, reduce co-pollutants, and deliver high-quality clean energy jobs.

This goal, one of the most ambitious in the nation, will put New Jersey at the forefront in the fight against climate change by meeting President Biden's goal for a clean energy transition.

Protecting and increasing access to open spaces throughout New Jersey by reigning in warehouse sprawl.

We want to preserve open space and prevent avoidable traffic by promoting responsible development that reduces the impacts large warehouses have on the environment, and expand access to our already protected spaces for all residents. We've worked to advance critical, common sense legislation that gives communities the tools they need to plan and zone responsibly.

\$45M

will be allocated to at least six school districts for electric vehicle programs over three years

Electrification of School Buses

This became our first common agenda item signed into law during this legislative session. Together with partners, we advocated and lobbied for legislation (A1282/S759) to establish an electric vehicle school bus program. Over three years, \$15 million dollars will be allocated to at least six school districts per year to purchase electric vehicle school buses and charging infrastructure. In order to mitigate the historic impacts of air pollution from heavy-duty vehicle traffic, half of the funding for the program must

be allocated to low-income, urban, or environmental justice communities. School buses are the most commonly used form of public transportation in the United States, and we are proud that New Jersey students can begin commuting to school without breathing in the harmful diesel fumes and other toxic air pollutants from fossil-fuel powered school buses.

Low-Carbon Building Materials

If cement were a country, it would be the third-largest emitter of carbon

dioxide in the world. After water, concrete is the most widely used substance on earth, and it accounts for approximately 7% of global carbon dioxide emissions. New and emerging technologies are able to produce low-carbon concrete. Techniques include alternative source materials, less energy intensive means of production, and carbon dioxide storage in production. Compared to traditional concrete, low-carbon concrete is as stable, can be more economical to manufacture in some circumstances, and reduces CO2 emissions. As an integral part of a low-carbon concrete coalition, New Jersey LCV successfully lobbied for the passage of S287, a bill that incentivizes use of low-carbon concrete technology and positions New Jersey to be a regional leader in the industry. The bill had nearly unanimous bipartisan support and was signed into law in January 2023.

Ending Warehouse Sprawl

New Jersey LCV is known as the Garden State, but residents are afraid we are becoming the Warehouse State. With the explosion of online shopping in recent years, proximity to the busiest port in the nation, combined with the expectation of same-day delivery, we are seeing warehouse construction throughout New Jersey. In addition to concerns about the footprint of development and loss of open space, warehouses bring concerns about impervious cover and stormwater and truck traffic and air pollution. Because we are a Home Rule state, this means that many planning decisions rest with local planning and zoning authorities. With that in mind, New Jersey LCV is designing programming to equip municipalities with the information and tools they need to make smart

New Jersey LCV is designing programming to equip municipalities with the information and tools they need to make smart planning decisions for responsibly-sited construction.

planning decisions for responsibly-sited construction. We worked closely with lawmakers to advance a bill to provide municipalities critical funding for master plan and zoning decisions in light of warehouse sprawl. Additionally, we amplified the Office of Planning Advocacy's warehouse guidance for municipalities; met with officials in the administration to share best practices for land use; shared local zoning and planning best practices at conferences, speaking engagements, and public hearings; and developed a widely attended webinar series for towns across New Jersey to get out in front of warehouse sprawl while still ensuring we are not moving warehouses to already overburdened areas, exacerbating long-standing pollution problems in environmental justice communities.

We must work to be stronger than the storm - not only the storms of our past, but those that we know are coming.

State Hazard Mitigation Plan

As we recognized the two-year anniversary of Hurricane Ida and the 11-year anniversary of Superstorm Sandy — two of the deadliest storms on record in New Jersey — we reminded policy makers that the impacts of climate change are already being felt. While our state works to reduce emissions and mitigate the existing effects of climate change, we must also plan for our future and increase our state’s resiliency. New Jersey LCV lobbied in support of legislation to include the threat of climate change and related hazards in the State Hazard Mitigation Plan, including consideration at the local and county levels of how we can meet these challenges, protecting lives and property. We must work to be stronger than the storm - not only the storms of our past, but those that we know are coming. This legislation, which passed in the Assembly and advanced through two committees in the Senate, is a first step to making our communities more resilient.

100% Clean Energy by 2035

While we mitigate the effects of climate change, we know the ultimate solution is a clean energy future. New Jersey LCV is part of a diverse coalition working on broad legislation to transition the state to 100% clean energy. However, we know that our transition cannot be done in a vacuum. That is why we are also advocating for environmental justice provisions, including removing trash incineration from the definition of “clean” so that these facilities do not receive additional ratepayer dollars; and the regulation of co-pollutants in addition to carbon emissions, which are toxic to human health. While Governor Murphy committed us to this goal with Executive Order 315, the work to codify this into legislation has already begun and is continuing in earnest.

Additional Key Policies

Stopping Dirty Fossil Fuels

We made nation-leading progress this year in our fight to stop dirty fossil fuel projects, including the Regional Energy Access Expansion pipeline. With partners, we led a challenge to the federal government’s approval of this project. The Attorney Generals of Connecticut, Maryland, Massachusetts, New Jersey, New York, Oregon, and Vermont also filed briefs. We will continue to fight against dirty energy projects as our petitions advance through D.C. Circuit Court in 2024.

Elections

This year’s elections were a resounding victory for the environment. This past election cycle, there were unprecedented

attacks on our environmental priorities, driven by fossil-fuel funded misinformation campaigns. The oil and gas industry spent millions of dollars to undermine the benefits of offshore wind and electrification, but we didn’t let them win. Voters overwhelmingly cast their ballots for our endorsed environmental champions, dealing a huge blow to the dirty fossil fuel special interests. With the stakes so high, this was New Jersey LCV’s largest spend ever on state legislative elections – and we expanded our environmental majority in the Assembly by four seats and by one additional seat in the Senate. Thanks to the work of New Jersey LCV, we were able to make over one million voter contacts, and 89% of our endorsed candidates at the state and local level were successful

in their races! These lawmakers will be ready in 2024 to keep protecting New Jersey’s critical natural resources.

Federal Work to Combat Climate Change

In collaboration with National LCV and other state LCV affiliates, we have been working to both educate the public, businesses, and lawmakers about the many direct benefits of the federal affordable clean energy act (Inflation Reduction Act). We’ve held events, press conferences, webinars, and written op-eds with members of Congress and other lawmakers to encourage local governments, schools, and nonprofits to take advantage of the free programs to help decarbonize.

From the Board Chair

Bob Conley
Chair, New Jersey LCV Education Fund

Dear Supporter,

Let me begin by thanking you for helping make this another successful year for the New Jersey LCV Education Fund (New Jersey LCV Ed Fund). We continue to educate the public and advocate for equitable environmental policy that will give New Jersey residents cleaner air, safer drinking water, open space for recreation, while supporting environmental justice for all New Jerseyans no matter their zip code. As a supporter, you know that this work is ultimately about improving the health, safety, and economic prosperity of all New Jerseyans. That's why I'm so enthusiastic about the work we've done with Governor Murphy and the New Jersey Legislature.

We've faced a few headwinds with our efforts to bring renewable energy to the state through offshore wind, but we have several offshore projects underway and we're extremely excited about the benefits of community solar, which enables residents who don't own a home or can't afford solar panels on their own roofs to participate in this clean, affordable, renewable energy source. It also provides significant discounts off the electricity bill when participants enroll. We've also organized against the expansion of dirty energy projects in our state and will continue to organize for clean energy.

The transition to a clean energy future is not merely an option but a pressing necessity in our rapidly changing world. Climate change, environmental degradation, and the depletion of finite fossil fuel resources have brought us to a critical juncture in history.

To mitigate these challenges and build a sustainable future, educating the public about clean energy is of paramount importance.

By raising awareness about the consequences of continued reliance on

fossil fuels, we can inspire individuals and communities to adopt cleaner energy sources such as solar and wind. We can create new industries and job opportunities, and can reduce air and water pollution, thus improving the overall health and well-being of our communities. In addition, a clean energy future can help bridge social and economic disparities. Access to affordable clean energy can alleviate the energy burden on low-income households and marginalized communities.

With your support, New Jersey League of Conservation Voters Education Fund will continue our efforts to raise awareness about the important environmental issues in our state and the need for bold action.

Thank you for your commitment to this vital cause. Together, we can create a cleaner, more sustainable, and brighter environmental future for generations to come.

Community Solar

Everyone deserves access to affordable, clean energy. Community solar gives low-income New Jerseyans who may not own their own homes, or who live in a multi-family unit, access to those economic and environmental benefits. This year, we knocked on over 3,000 doors in targeted communities to encourage residents to join the program, receive savings on their electric bills, and support clean energy. We activated nearly one thousand people to signal their support to the Board of Public Utilities as they made this program permanent this year. Working with partners, we helped advance legislation to further strengthen the program and remove barriers for low-income New Jerseyans during lame duck.

Advanced Clean Cars II

Transportation is the largest source of air pollution in New Jersey, contributing over 40% of our total emissions. That is why we pushed hard for the adoption of Advanced Clean Cars II (ACC II), regulatory action to have 100% of new personal vehicles in New Jersey be electric by 2035. Through action with our partners, we successfully petitioned the Department of Environmental Protection (DEP) and Governor to adopt this in 2023, with over one thousand New Jerseyans submitting comments in support.

Transportation contributes over **40%** of our total emissions in New Jersey.

Expanding Voting Rights

A healthy democracy depends on the right to vote. Throughout 2023, New Jersey LCV has continued our work in advocating for expanding voter rights and access to the ballot and urging voters to make their voices heard in elections. We were excited to see the introduction of the New Jersey Voting Rights Act as part of a growing trend by states to introduce state-specific Voting Rights Acts in response to the continual degradation of the federal Voting Rights Act, and we were proud to work with our partners to highlight the importance of voting rights and the New Jersey Voting Rights Act through statewide media. We also continued to work with our partners to advocate for the passage of the Same Day Voter Registration bill, including public events, crowd canvasses, virtual postcards, and a digital day of action that reached more than 90 legislative offices statewide.

Coalition Work

Stormwater Reduction

New Jersey LCV continues to lead Flood Defense NJ, a coalition of non-profit organizations, academics, and business voices committed to mitigating stormwater challenges and localized flooding. Throughout the United States, municipalities are working to solve this problem by implementing a stormwater utility. Similar to a water or sewer utility, a stormwater utility is a dedicated funding mechanism to pay for a community's stormwater management program. There are over 2,000 stormwater utilities implemented in over 40 states in our country, which means that New Jersey is behind the curve on this.

Flood Defense NJ has been working to build support for stronger stormwater management practices throughout the state of New Jersey. We have worked with the DEP to discuss this work

and assisted several communities in applying for grant funding and technical assistance to perform stormwater feasibility studies. We are working directly with communities who are in the process of their feasibility studies, and are continuing to perform outreach across the state to educate the public on why a stormwater utility can work as one solution to localized flooding. This year we hosted listening sessions for residents in municipalities undergoing feasibility studies, tabled at events in these municipalities to engage the public and drum up local support, hosted education events for environmental commissions and interested municipal leaders, worked with activists and concerned residents to draft op-eds on flooding, and hosted a statewide flooding webinar. We will continue our efforts to engage and educate the public on how a stormwater utility can be one effective solution against the destructive floods that New Jersey faces as a result of climate change.

Flooding in Cinnaminson after a storm

The adoption of the landmark Inland Flood Protection made New Jersey the first state to implement rules regarding new development and reconstruction projects that accounts for the impact of climate change by using predictive precipitation modeling

Coalition for the Delaware River Watershed

New Jersey LCV serves as the New Jersey state lead for the Coalition for the Delaware River Watershed, consisting of over 150 organizations working to protect the Delaware River Watershed for future generations. As the New Jersey state lead, we connect and coordinate with 30+ New Jersey based-members, prepare educational and advocacy materials regarding the watershed and work closely with coalition staff to advance CDRW's New Jersey priorities. We continue to work closely with New Jersey's members and helped to organize two opportunities for members to meet in person, including for a boat trip in Lake Hopatcong.

This year, we worked with New Jersey members to ensure that state and federal funding goes towards water infrastructure, advances water quality regulations, reduces the amount of plastics entering New Jersey waterways and oversees the passage of key legislation to require the disclosure of information concerning flood insurance on properties to guarantee that buyers are aware of damage a property has experienced due to flooding. The adoption of the landmark Inland Flood Protection rule in July, which made New Jersey the first state to implement rules regarding new development and reconstruction projects that accounts for the impact of climate change by using predictive precipitation modeling, was another important victory this year. We look forward to continuing to work with the coalition to advance protections in the watershed.

Offshore Wind Progress

As part of the statewide efforts to transition to clean and renewable energy, New Jersey LCV has continued to spearhead efforts in supporting responsibly developed offshore wind through the New Jersey Wind Works (NJWW) coalition. NJWW is a growing coalition of environmental organizations, faith based groups, labor unions, business groups, community based organizations as well as grassroots leaders and activists. As of October 2023, New Jersey Wind Works has approximately 300 active volunteers and 70 active volunteer captains. Further, we have grown the coalition to over twenty-five members from environmental, conservation, faith, and labor groups. We continued with educating across the Jersey shore, hosting educational sessions, webinars, and appearing at community events all over the state. NJWW was also a finalist for the Oceanic Network's 2023 Ventus Award for Offshore Wind Leadership.

This year, the Atlantic Shores South project will begin to ramp up its state and federal hearings, with their Final Environmental Impact Statement expected for late spring/early summer in 2024. This project is seeking multiple Green Acres Diversions to bring their transmission onshore in Atlantic and Monmouth counties, respectively. Further, there are currently several active lawsuits against the offshore wind developers, state and federal agencies by anti-wind opposition groups that largely have ties to fossil fuel funded right-wing think tanks.

Meanwhile, two awards were made in early 2024 for a total of 3042 MW of offshore wind capacity, enough energy to power 1.8 million homes. New Jersey has a number of offshore wind projects in the early stages of development that should be supplying energy to the grid within the decade. Things are heating up in New Jersey waters as we look forward to the fourth round of offshore wind solicitations-- Governor Murphy has charged the New Jersey Board of Public Utilities to accelerate the fourth solicitation for new offshore wind lease areas with the anticipation that the awardees would be announced in the early part of 2025.

Keep It Green is made up of more than 150 statewide, local, and regional organizations advocating for land preservation protections and funding.

Keep it Green

As one of New Jersey's oldest and most successful environmental coalitions, Keep It Green is made up of more than 150 statewide, local, and regional organizations advocating for land preservation protections and funding. The coalition launched both a policy and communications working group this year to expand opportunities for member engagement and mobilize around pressing issues impacting open space funding. As co-chair of the coalition, New Jersey LCV prepared a toolkit for members to submit comments on the DEP's Statewide Comprehensive Outdoor Recreation Plan and worked with partners to prioritize the creation of additional green space in overburdened communities. Keep It Green also launched a campaign to support the continuation of the corporate business tax surcharge, which provides over \$40 million a year in land preservation funding. The coalition will continue working to ensure that all New Jerseyans have access to high quality open spaces, no matter their zip code.

Democracy

The New Jersey LCV Education Fund's civic engagement work culminated in the creation of a voter education video that featured the voice of Senator Cory Booker. This 62-second animated video, which included a version with Spanish subtitles, covered all the information voters needed to know to cast their ballots by mail, early in-person, and on Election Day. The video had over 3.3 million impressions before Election Day, and was paired with a static ad, which received 1.7 million impressions, that helped voters identify their polling locations both during the early voting period and on Election Day.

Strategic Plan

We are winding down our current three-year strategic plan period, which ends March 31, 2024, and have made great progress toward the 16 goals outlined for our New Jersey LCV and New Jersey LCV Education Fund organizations.

Overall the goals pertained to strengthening and diversifying the board, continuing to build and elevate our activist volunteer program, growing our influence in the legislature, playing a larger role in local elections, creating authentic environmental justice partnerships, ensuring our policy priorities are just and anti-racist, and diversifying our fundraising efforts.

Young Professionals Program

In support of our strategic plan goals to target new audiences and expand and diversify our membership, this year we launched our Young Professionals program, which creates an affinity space for environmentally interested individuals under 40 to network, socialize, and cultivate a relationship with New Jersey LCV. The group is led by a co-chair committee of interested partners, who have collaborated with New Jersey LCV to help organize two social networking events: a baseball game at the Somerset Patriots and a Young Professionals networking hour to start off our Monmouth County PAC event.

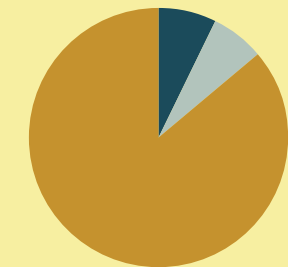

New Jersey LCV carefully oversees your contributions to a healthier, more beautiful New Jersey.
